Designer and founder in London. I'm fifteen and have been making things for money since thirteen. I run two small companies, Ignura, a launch studio for apps, and Bevel, a 3D art team, and I design for MenuFit and Okara. I like owning a product end to end: the brand, the interface and the code that ships it.

Experience

Ignura — Founder · Since 2026

Launch studio for apps · London

- Started the studio and run it day to day with a team of four: design, launch films, UGC and launch day, so an app team gets one crew instead of five freelancers.
- Grew it to six figure ARR on fixed scope packages, from a one week App Store screenshot set to a four week launch that covers the landing page, polish on key screens, a launch film, UGC and launch day.
- Open every engagement with a free teardown: a written review within a week, with two or three mockups of the fixes we would make first. Burn, a monthly retainer, keeps campaigns and design going after launch.
- Run a UGC arm with a roster of 21 creators, backed by a guarantee: 10k views in two weeks or the money back.
- Delivered work for Okara, Splitting Point, Yummers and hypjam, and made Ignura's own brand, launch film and site, plus an internal ops dashboard and a site assistant.

MenuFit — Designer · Since 2026

The app for eating out healthy · iOS and Android

- Product designer on an app used by two million people.
- Work on the core experience: a personalised healthy menu for every restaurant, with calories, protein, carbs and fats on each dish and a score for how well it fits your macros.
- Design for both iOS and Android, where the app is live.

Bevel — Founder · Since 2026

3D art team for hire · Blender, ZBrush, Substance

- Built a 3D art team that studios hire by the job, at published rates, so clients know the price before they ask.
- Reached six figure ARR delivering game ready models, textures and commissions.
- Cover the full pipeline in Blender, ZBrush and Substance, from sculpt to textured asset, and run the studio's brand, site and client work.

Okara — Designer · Since 2026

AI CMO that drafts and ships marketing work

- Design the product for an AI CMO that drafts and ships marketing work, including the dashboard.
- Its launch film reached 14M views on X in a day.
- Work in Figma and ship in Next.js and Tailwind, and maintain the design system.

Side project

Wayari — Founder • Since 2026

Side project • Mac app

- A desktop app for running several coding agents at once: ship PRs while you sleep, merge them with your eyes open.
- Designed and built end to end in Electron, TypeScript, React and Next.js, including a desktop dock that shows every job, review and merge.

Earlier work

Nooli — Head of Product • 2026

Adaptive lessons for ages three to five • iOS

- First hire. Owned the product and its design system, built in SwiftUI.
- Shaped lessons for three to five year olds that adapt to the child.

Bidframe — Founder • 2026

Reads a tender and flags what would disqualify your bid, each linked to its clause.

Weld — Founder & PM • 2026

A marketplace fixing how Roblox studios hire developers. Waitlist is live.

Other work

jawadj.design — brand identity, ui/ux and full site builds

world ent — 3d artist on live roblox titles

cosmos models — 3d commissions in zbrush, blender and substance

vizzbees — saas site build

splitting point — landing page build

acquiblox — cmo, marketing and community growth

basket ent — acquisitions, then post acquisition liveops

sof agency — pr, partnerships and crowdfunding for game studios

kleoklaw — mobile product site build

Skills

Design
Figma, Framer, Logo design

Build
Next.js, React, TypeScript, Tailwind, Supabase, Vercel

AI
Claude Code, Claude Design, Cursor, Codex, OpenRouter, Grok, Grok Bot, Hermes Agent, Wayari

3D
Blender, ZBrush, Substance
